

Boiler Maintenance

We supply and stock a large array of boiler maintenance spare parts, these include, boiler door joints, graphite packing sleeves, gauge glass cones, gauge glass tubes, borosilicate glass, ceramic/glass webbings, rope, ladder tapes, fire blanket, ceramic paper, fibrefrax board.

Boiler Door Joints are most commonly used at operating pressures of 180 psi (12.4 bar) and 380°F. (193°C.) (steam pressure applications) for an average service life of up to one year. When used at pressures of 200 psi + the lifetime of the boiler joints decreases.

That being said as the application changes (.ie – water, condensate and air vessels) where the operating conditions become far less severe, (below 250°F/121°C) you will find that the service life extends considerably.

All items are ex stock.

We stock a vast range of boiler door joints, most sizes as standard, although bespoke sizes can be supplied.
