

Circlips & Bonded Washers

CIRCLIPS

Circlips are available as both an internal and external fastening clip. A standard material for circlips is carbon spring steel. Stainless Steel and Steel are also available. Plating such as phosphate and oil is available as a finish to give added corrosive protection where required. A zinc plated finish is available for extra corrosive resistance.

Enquire with Abbey Seals as to Circlips that will suit your specifications.

BONDED WASHERS & FLANGE SEALS

Bonded washers or sealing washers are used in applications that require a stronger seal than ordinary washers. The bonded washers are sealing discs that seal threads and flange joints. They have a metallic ring and a rubber sealing pad bonded together and the sizes available are in metric and inches.

Polyurethane Flange Seals are used on SAE flange fittings on hydraulic hoses. High pressure and pumping are common problems which prevent reliable sealing in applications where O rings are fitted. Polyurethane Flange Seals prevent this problem.

Abbey Seals supply bonded washers in stainless steel and galvanized steel and come in a variety of sizes.
